PROFESSIONAL SUMMARY

Maheen Rizwan is a penetration tester and web bug bounty hunter with a deep interest in offensive security and red team operations. She actively develops her skill set through hands-on practical labs and CTFs, leveraging advanced tools and AI integrations to maximize efficiency, accelerate technical workflows, and deliver high-value results.

TECHNICAL SKILLS

- **Offensive Security & Pentesting:** Active Directory (AD) Exploitation, Web Application Auditing, Vulnerability Assessment, Network Reconnaissance, Password Spraying, Credential Stuffing, Wireless WPA Auditing.
- **Security Toolbelt:** **NetExec (nxc)**, **BloodHound**, **SharpHound**, **Impacket**, **bloodyAD**, **samba-tool**, **Nmap**, **Burp Suite**, **Wireshark**, **Metasploit**, **CrackMapExec**.
- **Defensive Engineering:** File Integrity Monitoring (FIM), Public Key Infrastructure (PKI), Cryptographic Hashing (**MD5**), Log Tracking, Rule Tuning.
- **Programming & Systems:** C/C++, Python, HTML/CSS, JavaScript, Apache Web Server, Windows Server 2022, Windows 10 Enterprise, Linux (Kali, Ubuntu).

PRACTICAL SECURITY PROJECTS

Web Application Vulnerability Assessments & Bug Hunting

- Executed active vulnerability assessments and web application penetration testing to identify high-risk logical flaws and security gaps.
- Leveraged automated scanners alongside manual proxy interception via **Burp Suite** to discover missing security controls, mapping findings directly to the **OWASP Top 10** framework.
- Documented actionable remediation steps for discovered vulnerabilities, ensuring technical gaps are clearly communicated for rapid patching.

AI-Powered Web Reconnaissance Engine (Acheron)

- Engineered a centralized security auditing tool in Python that fingerprints 50+ unique infrastructure structural signatures.
- Automated missing security header analysis, cookie policy checks, and high-risk port scanning into clean, structured HTML reports.

Custom Host-Based File Integrity Monitor (FIM) | Python & SQLite

- Designed and built a modular Python-based FIM utility featuring a custom graphical interface to monitor host system path modifications dynamically.
- Structured an SQLite backend tracking cryptographic hashes (**MD5**) to instantly alert system administrators of unauthorized Create, Update, or Delete (CUD) events within an active 2-3 second polling window.

Public Key Infrastructure (PKI) & Apache Hardening Lab

- Deployed an end-to-end sandbox PKI infrastructure simulating enterprise-level web service isolation and Data Loss Prevention (DLP) monitoring conditions.
- Configured a secure multi-page Apache Web Server environment, generated a self-signed Root Certificate Authority (CA), and successfully resolved end-to-end HTTPS/SSL validation parameters within client browsers.

PROFESSIONAL TRAINING & EXPERIENCE

Advanced Cybersecurity Trainee | Digital Excellence & Skills Center (DESC) / SNSKIES (April 2026 – July 2026)

- **Enterprise Domain Auditing:** Built out mock target environments leveraging Windows Server 2022 and Windows 10 Enterprise to analyze common active attack surfaces and exploit vectors.
- **AD Infrastructure Mapping:** Mapped complex domain privilege paths and configuration security gaps (such as dangerous GenericAll structural permissions) using **BloodHound** graph analysis and **SharpHound** collection modules.
- **Lateral Movement Frameworks:** Executed structured initial access and lateral movement workflows using **NetExec (nxc)**, **Impacket**, and **CrackMapExec**, conducting proxychained password spraying and credential stuffing scenarios against localized targets.
- **Low-Level Object Exploitation:** Utilized **bloodyAD** and **samba-tool** for precise programmatic object manipulation within directory systems.

Ethical Hacker Intern | Secure Dev Labs (June 2026 – July 2026)

- Conducted simulated network infrastructure assessments, practicing privilege escalation and internal network pivoting techniques.
- Performed deep web application target discovery and automated service mapping using **Nmap**.

EDUCATION & LEADERSHIP

- **BS in Cybersecurity** | Abdul Wali Khan University Mardan (AWKUM)
- **Female Coordinator** | Technology & Innovation Society, AWKUM Students Council
 - Championed technical literacy campaigns on campus, organizing a comprehensive GitHub Masterclass for 100+ students.
 - Dedicated to mentoring and bridging the gap for female peers transitioning into technical roles within Offensive Security and AI.

CERTIFICATIONS & STANDINGS

- **TryHackMe:** Global Top 15% Rank (45+ specialized lab environments solved, highlighting intensive tracks in OSINT, DFIR, and Cloud Security).
- **Certified API Hacking Junior (CAPIJ)** | The XSS Rat (Issued: July 2026)
- **Vulnerability Assessment Achievement** | Center for Cyber Security & Digital Forensics (CCSDF) (Issued: April 2026)
- **CCNA (Pt. 1): Introduction to Networks** | Cisco Academy, UET Peshawar (Issued: October 2025)
